Project

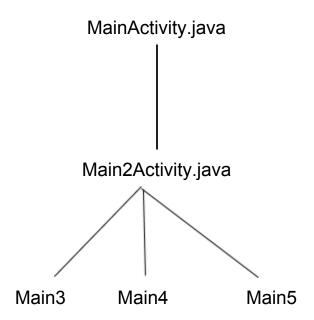

INTRODUCTION

The android application that is developed is useful in conducting tests. The quiz application helps the user to test their knowledge in available topics in the application. The application is simple and easy to use. It uses the concepts of Intents,Radio Groups,Activities,Buttons,Toast messages in android.

The app is structured as follows:

- 1) Firstly when the user opens the app the home screen asks the user to enter name and number.
- 2) It checks if the fields are empty and displays message to the user to enter details before clicking submit button
- 3) On submitting the details the next activity appears where the user can select one of the available topics in the screen.
- 4) It checks if the user has selected any of the available options and displays message to the user to select one option before clicking submit button
- 5) On selecting the topic the user will be directed to the corresponding screen.
- 6) Now the user can answer the questions(mcqs) present in that section.
- 7) On submitting the answers the user can view the score obtained.
